the EoL carbon credits

With the agricultural methods of biodynamics, the Economy of Love Standard is committed to actively increasing carbon sequestration through afforestation projects, compost production, soil carbon sequestration, and the implementation of renewable energy on EoL licensee farms. The EoL carbon credits are valuing the high environmental service of our farmers and provide an additional income through the sale of the Carbon Credits Certificates.

Soil carbon sequestration

Holistic Approach on Carbon Credits

Co-Benefit

EoL covers all 4 dimensions of sustainable development: **society**, **economy**, **culture**, and **environment**. Thanks to our network of producers, buyers and certifiers, EoL is able to support biodynamic farmers and produce of products with a positive impact, while sequestering net carbon and enhancing farm biodiversity. The Standard aims to create a system that serves the global community by taking into account the living conditions of future generations.

We guarantee full transparency when it comes to the registration and tracing of generated carbon credits and sales. Buyers are not only purchasing Carbon Credits Certificates but invest in a well-functioning value chain based on solidarity and regenerative agriculture. We believe that everyone should have easy access to healthy and biodynamic nutrition. EoL products' prices are made competitive and affordable thanks to additional revenue streams from selling carbon credits.
